

Welcome to GitHub!

We are excited to host you in our Bellevue Hub this evening.

G

Dave Burnison
Senior DevOps Advocate

Bellevue Hub Code of Conduct

- Keep it clean!
 - When in doubt, throw it out (in the trash)!
- Need something?
 - Ask a Community Manager or GitHub Employee!
- See questionable behavior?
 - Please notify a Community Manager or GitHub Employee!
 - e.g. Attendees wandering into restricted areas

IDC MarketScape for AI Coding and Software Engineering Technologies 2025

GitHub recognized as a Leader by IDC MarketScape

The report noted, “GitHub Copilot is one of the most widely adopted AI-powered coding assistants in the world. Launched in 2021, Copilot has become a cornerstone of the modern developer's toolkit, integrating deeply with GitHub's ecosystem and a wide range of IDEs.”

We believe GitHub's differentiated value lies in its comprehensive, platform-driven approach to AI-powered development. As the IDC MarketScape notes, “The platform is designed to assist throughout the entire software development life cycle, from planning and code generation to testing, documentation, and code review, providing contextualized assistance at every stage. This comprehensive approach empowers organizations to streamline workflows, maintain code quality, and accelerate delivery across even the most complex, multiplatform projects.”

Monthly GitHub Enterprise Roundup

- September '25 Enterprise Roundup - GitHub Resources

GitHub is shipping new features, product updates, and best practices faster than ever. To help you stay ahead, our Enterprise Advocacy team has curated this monthly roundup—bringing you a concise, enterprise-focused summary of the most important updates you might have missed.

In this post, you'll find a carefully selected list of key innovations, expert insights, and must-know resources—guided by feedback from GitHub's largest customers—to help your team innovate faster, boost productivity, and enhance security. Share with your teams and stakeholders so they can also get the most out of their GitHub experience.

GitHub Copilot Updates

-  [Demo: end-to-end agentic development with GitHub Copilot \(5:19\)](#) - Unlock the full potential of GitHub Copilot by seeing how Copilot Agent Mode can automate everything from environment setup to code generation, testing, and self-healing bug fixes—dramatically accelerating developer productivity and backlog management. Discover how leveraging instruction files and Copilot's integrated workflows ensures your team's code meets global standards, streamlines collaboration, and keeps projects moving forward with minimal manual intervention. If you want to lead teams that deliver faster, smarter, and with fewer headaches, this walkthrough is essential viewing.
-  [Agents panel: Launch Copilot coding agent tasks anywhere on GitHub](#) - Empower your teams to offload routine coding tasks to Copilot agents that run in the background and surface pull requests only when they're ready for your review. This post details how to set up and monitor agents directly within GitHub's interface—no CLI juggling required. Enterprise leaders will learn how to reduce blocker wait times, standardize code quality, and reclaim developer hours for high-value work. See also the  [related changelog item](#).
-  [All Supported AI models in GitHub Copilot](#) - Learn about the supported AI models in GitHub Copilot. GitHub Copilot supports multiple models, each with different strengths. Some models prioritize speed and cost-efficiency, while others are optimized for accuracy, reasoning, or working with multimodal inputs (like images and code together).

Our biggest event of the year - what we like to call the **World's fair of software** - bringing together enterprise leaders and engineering experts shaping the future with AI.

This year, we're zeroing in on how companies like yours are:

- Streamlining your CI/CD pipelines to improve developer velocity
- Increasing visibility across your application
- Implementing AI-native threat detection
- Embedding security into the developer workflow

You'll hear from top industry voices, explore hands-on product demos, and connect with other enterprise leaders to learn how they're driving innovation forward.
