

GitHub Universe '25 – Product Updates

Dave Burnison

Sr. DevOps Advocate / GitHub
<https://github.com/daveburnisonms>

Our biggest event of the year - what we like to call the **World's fair of software** - bringing together enterprise leaders and engineering experts shaping the future with AI.

This year, we zeroed in on how companies like yours are:

- Streamlining your CI/CD pipelines to improve developer velocity
- Increasing visibility across your application
- Implementing AI-native threat detection
- Embedding security into the developer workflow

Hear from top industry voices, explore hands-on product demos, and connect with other enterprise leaders to learn how they're driving innovation forward.

2 Comments Add Tag

State ActiveArea PetsWorkshopUpdated by Dan Hellem: Wednesday

Reason Implementation startedIteration PetsWorkshop\Iteration 1Details30

Description

User Story: Create multi-select breed filter dropdown component

Narrative

As a potential dog adopter, I want to see and select from all available dog breeds in a dropdown interface so that I can begin narrowing down my search to specific breeds I'm interested in.

Acceptance Criteria

- Dropdown component displays all unique breeds from the database
- Users can select multiple breeds simultaneously
- Component shows visual indication of selected breeds (checkboxes or badges)
- Dropdown is searchable/filterable for quick breed lookup
- Breeds are displayed in alphabetical order
- Component handles loading state while fetching breeds

📅 GitHub Copilot for Azure Boards

Activate Copilot coding agent directly from Azure Boards. Less switching, more doing

<https://www.youtube.com/watch?v=xutWIZlaoWE>

 Microsoft Ignite | November 18–21, 2025

AI Powered workflows with GitHub and Azure DevOps

Tue, Nov 18 | 3:45 PM - 4:30 PM PST

Modernize your DevOps strategy with Agentic DevOps by migrating your Azure Repos to GitHub while continuing to leverage the investments you've made in Azure Boards and Azure Pipelines. We'll walk through real-world patterns for hybrid adoption, show how to integrate GitHub, Azure Boards and Azure Pipelines, and share best practices for enabling agent-based workflows with the MCP Servers for Azure DevOps, Playwright and Azure.

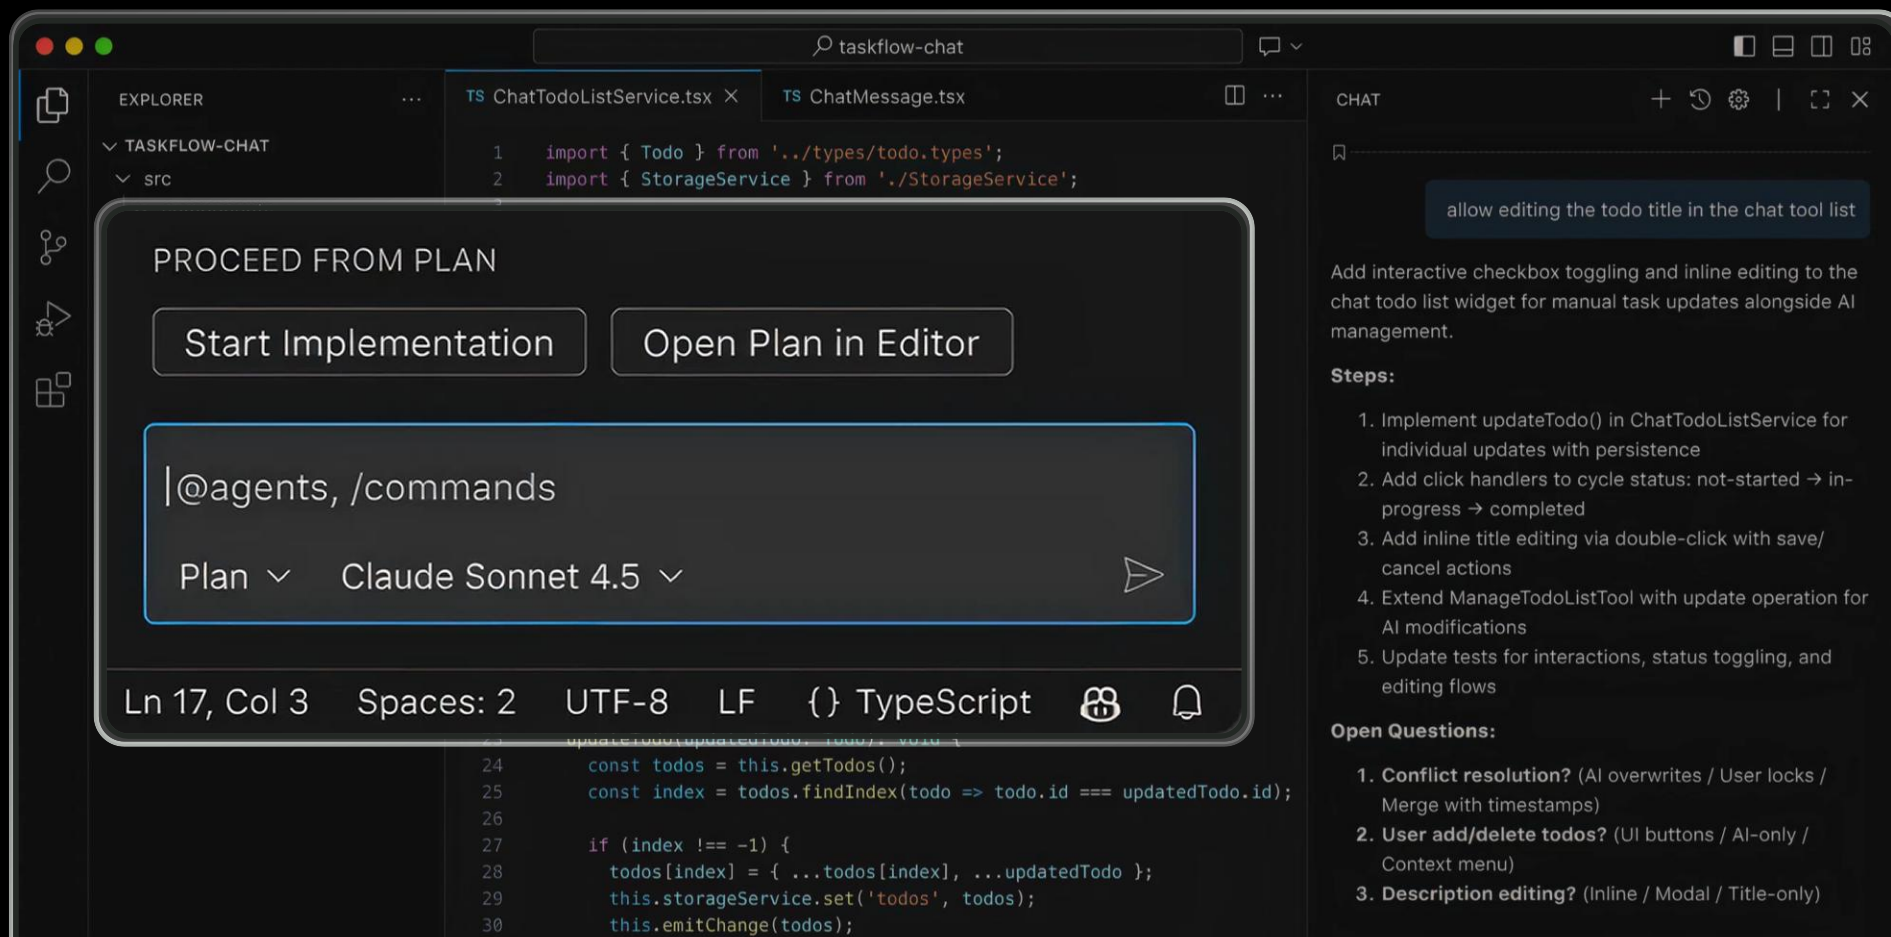

Dave Burnison , Sr. DevOps Advocate – GitHub

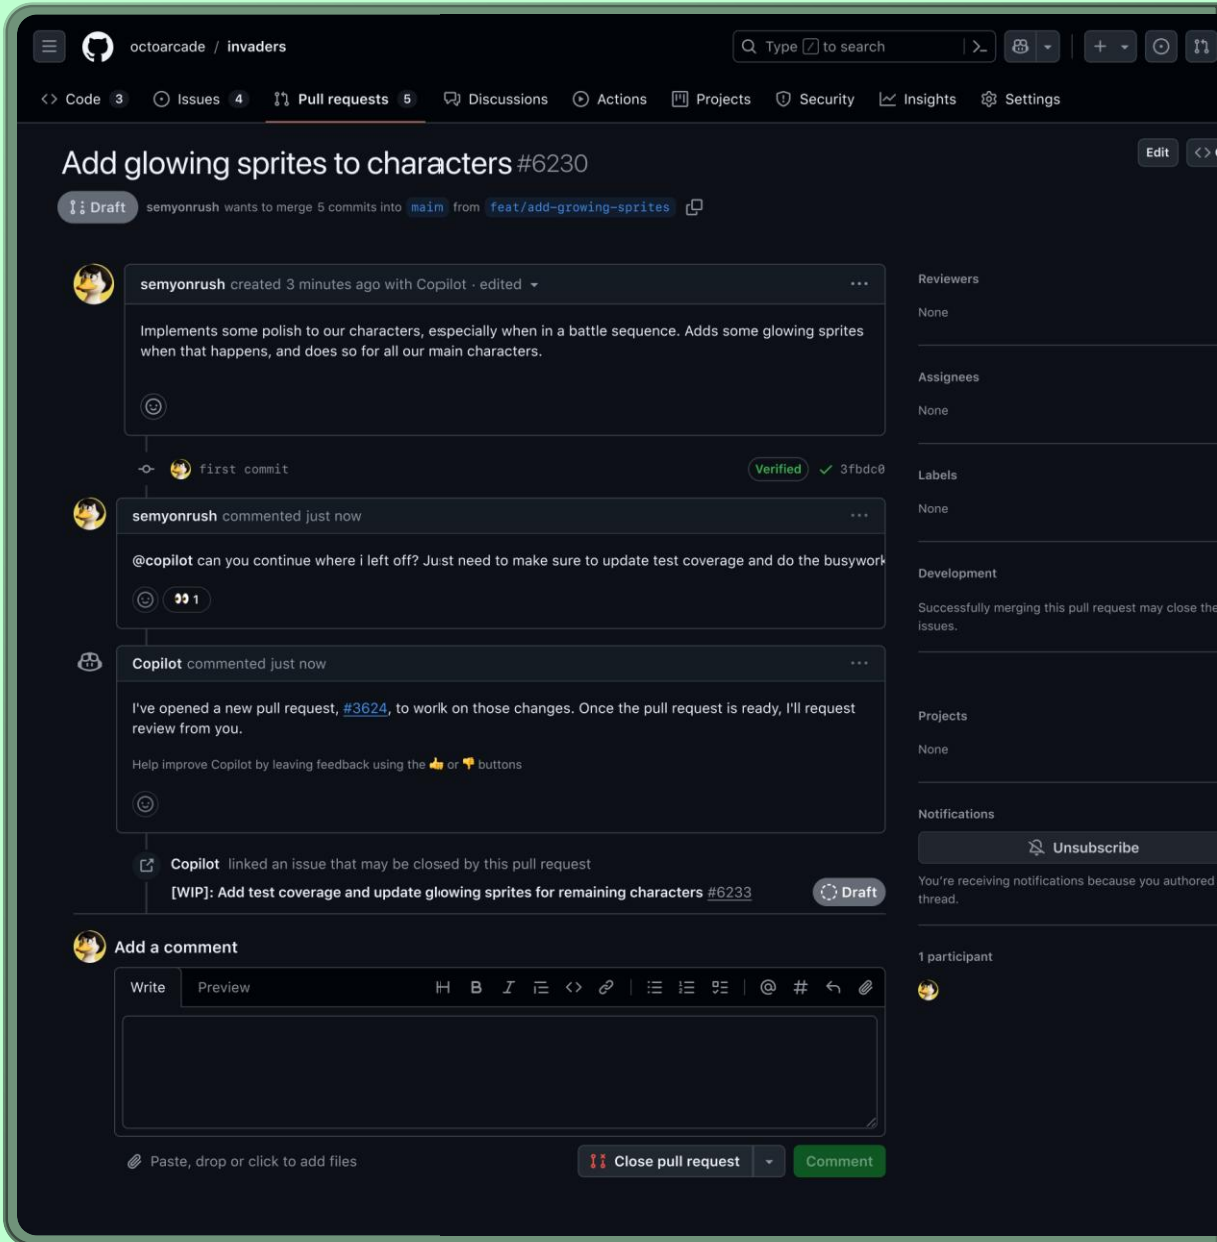

Dan Hellem , Azure Boards – Microsoft

Terminal is the new AI IDE. As a developer use the Copilot CLI to multiplex tasks like new features, prototypes, and more

Agent tasks (“mission control”)

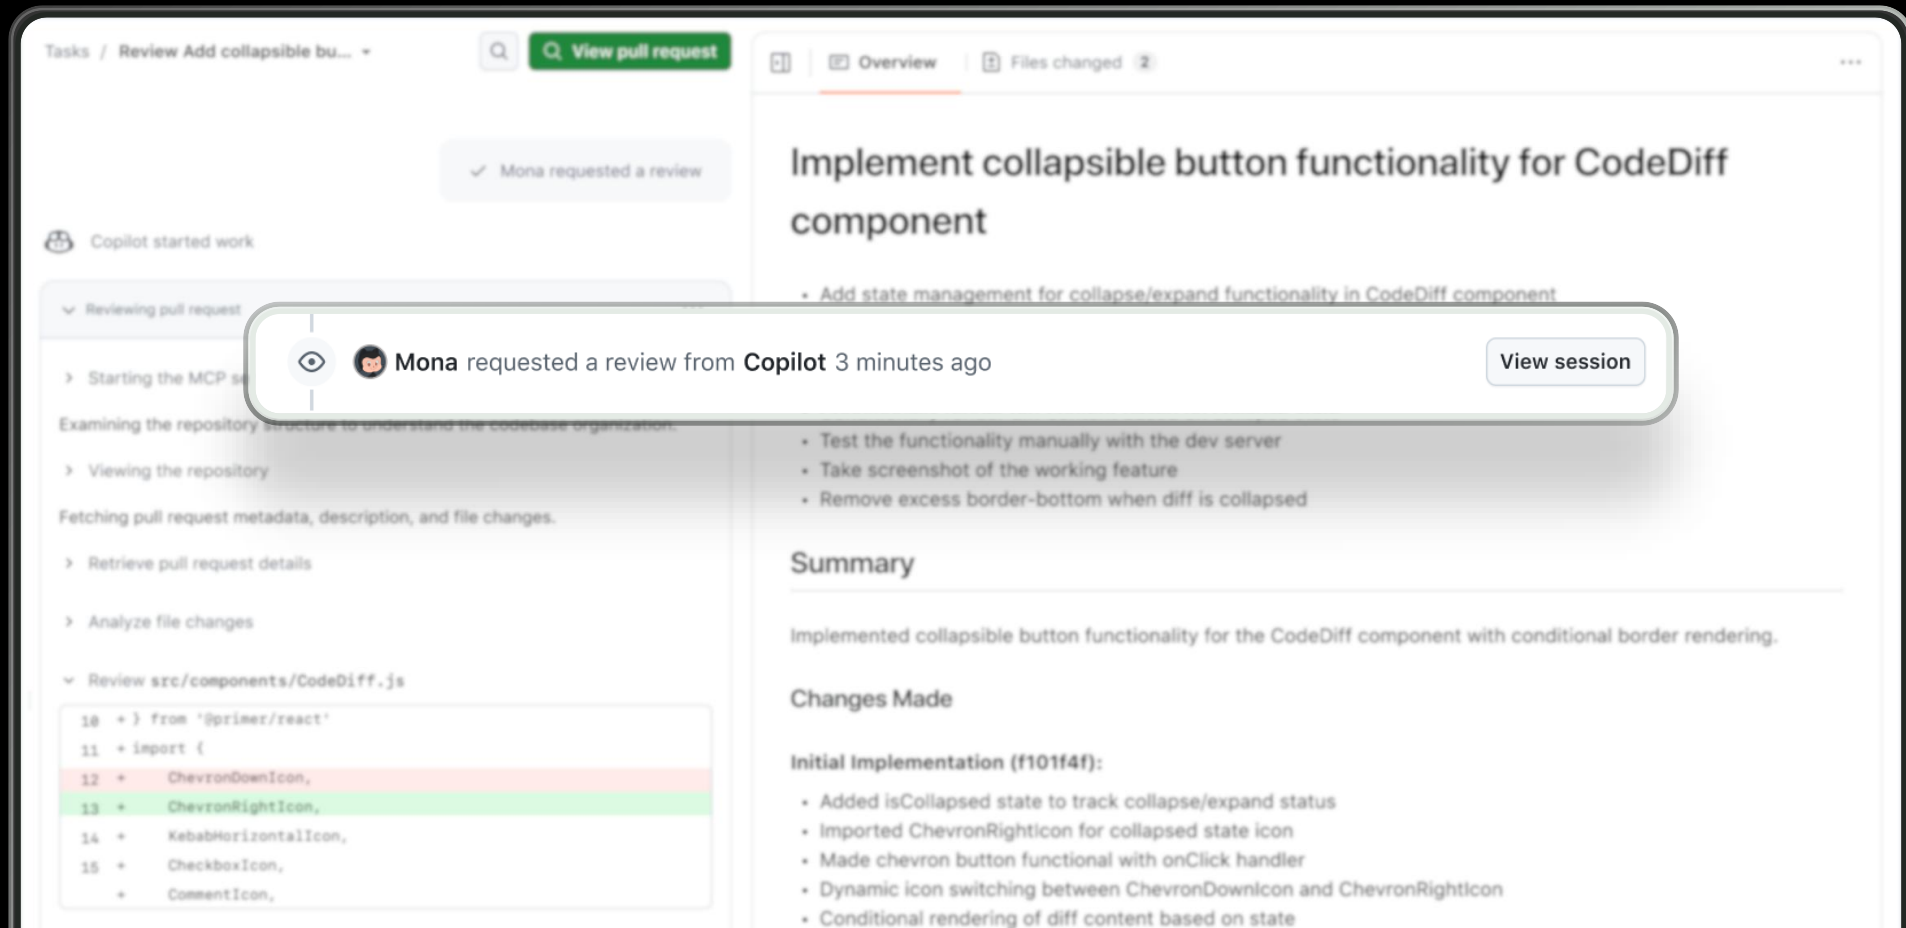

Manage, monitor, steer and review agent tasks, all in one place

Jump between tasks, see what’s changed, track Copilot’s progress, and step in with course-corrections as needed.

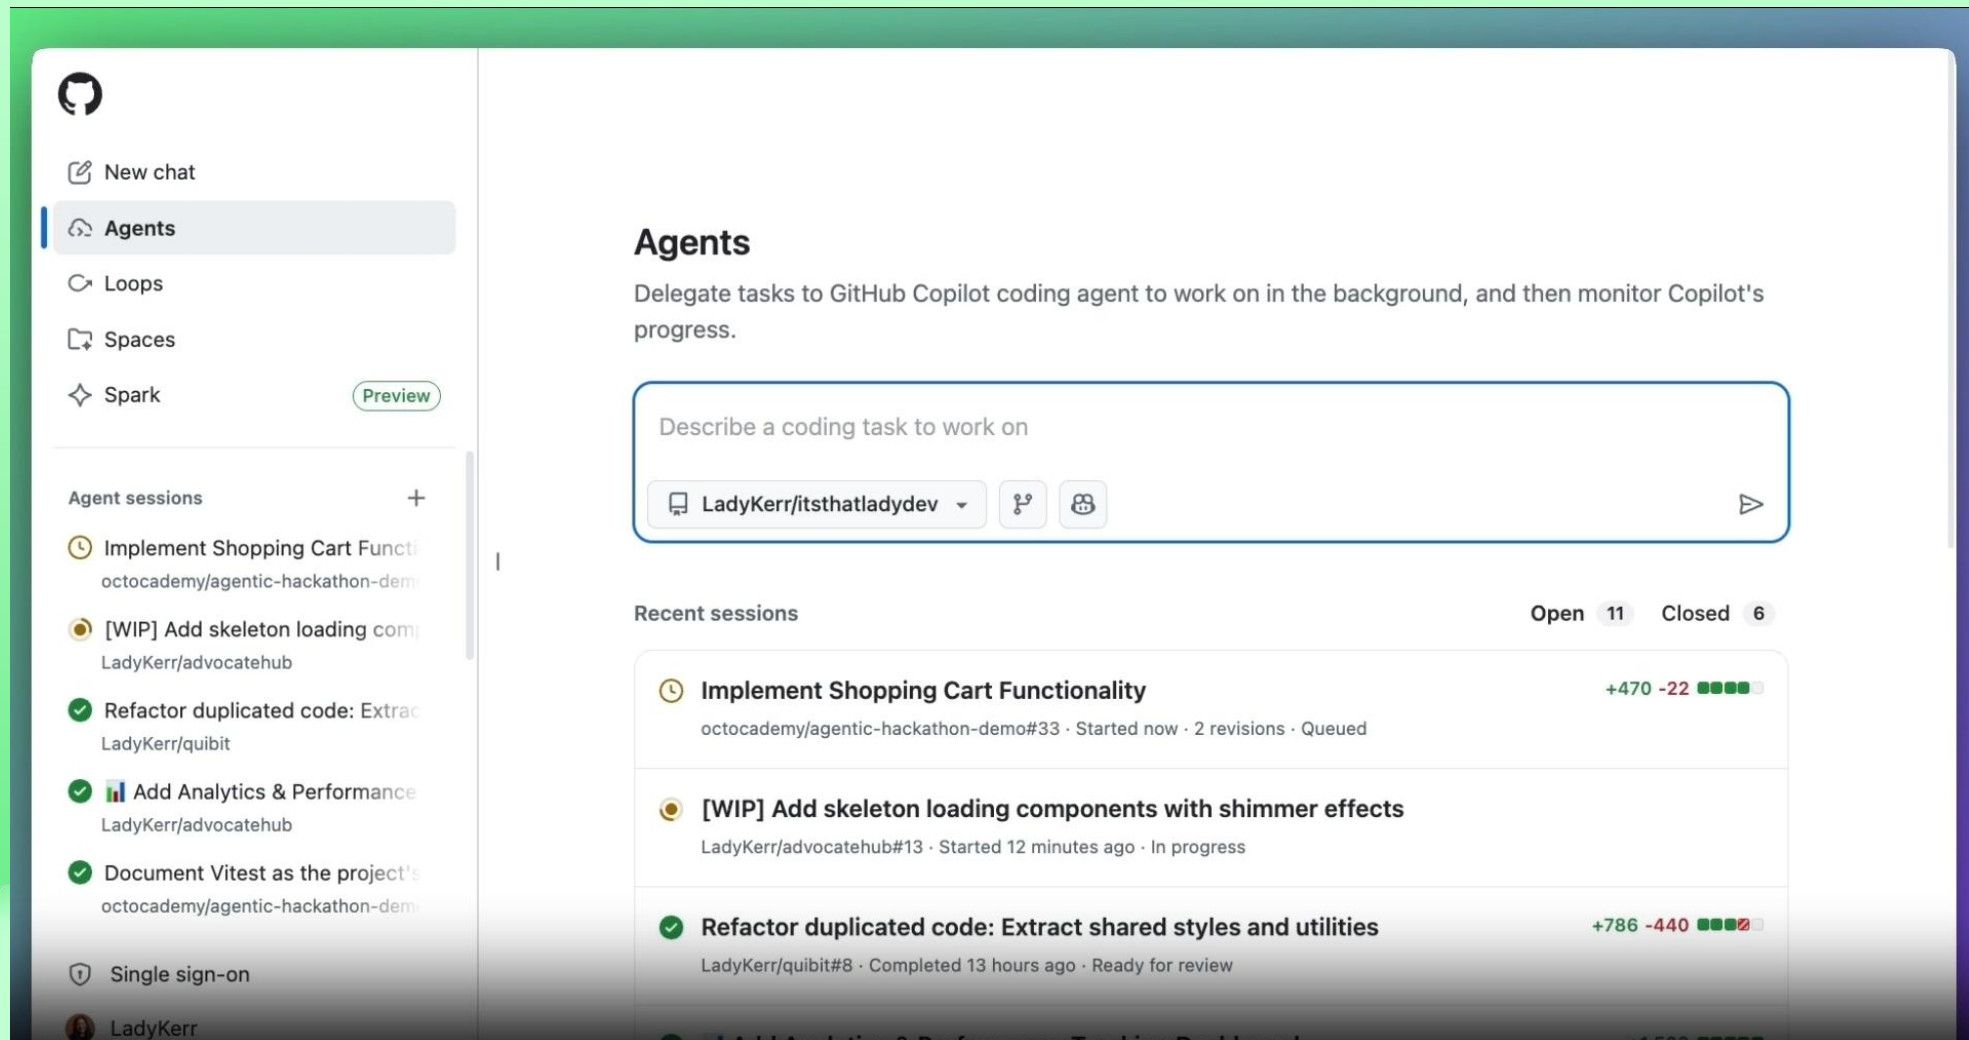

🔍 Copilot code review

Have Copilot review code, then hand updates to coding agent for implementation

Demo - Build faster with mission control and agent mode in VS Code

Demo - Assign and manage GitHub Copilot coding agent tasks

The screenshot displays the GitHub Copilot Agents interface. On the left sidebar, the 'Agents' tab is selected, showing a list of agent sessions with green checkmarks indicating completion. The main panel is titled 'Agents' and includes a description: 'Delegate tasks to GitHub Copilot coding agent to work on in the background, and then monitor Copilot's progress.' Below this, a task input field contains the text 'We need to ensure all products are easily found by search engines.' A dropdown menu shows 'octodemo/geektrainer-tails...' and a red box highlights the 'Assign agent' icon (a person with a plus sign). A dropdown menu is open, showing options: 'None' (selected with a checkmark), 'Search engine optimization (SEO)', and '+ Create an agent'. Below the task input, the 'Recent sessions' section lists four completed tasks with their respective commit counts and status (Ready for review).

Agents

Delegate tasks to GitHub Copilot coding agent to work on in the background, and then monitor Copilot's progress.

We need to ensure all products are easily found by search engines.

GitHub Monthly Enterprise Roundup (MER)

GitHub is shipping new features, product updates, and best practices faster than ever. To help you stay ahead, our Enterprise Advocacy team curates a monthly roundup — bringing you a concise, enterprise-focused summary of the most important updates you might have missed.

In these posts, you'll find a carefully selected list of key innovations, expert insights, and must-know resources—guided by feedback from GitHub's largest customers—to help your team innovate faster, boost productivity and enhance security.

Share with your teams and stakeholders so they can also get the most out of their GitHub experience.

Follow **GitHub Enterprise** on **LinkedIn** to be notified of each new post.

Thank you
