GitHub Copilot agents

Agent Mode

Core capabilities

- Multi-file edits across your codebase
- Real-time debugging in VS Code
- Synchronous, interactive workflows

Best for

- Complex IDE tasks requiring immediate feedback
- Multi-step solutions with human oversight
- Debugging and testing interactions

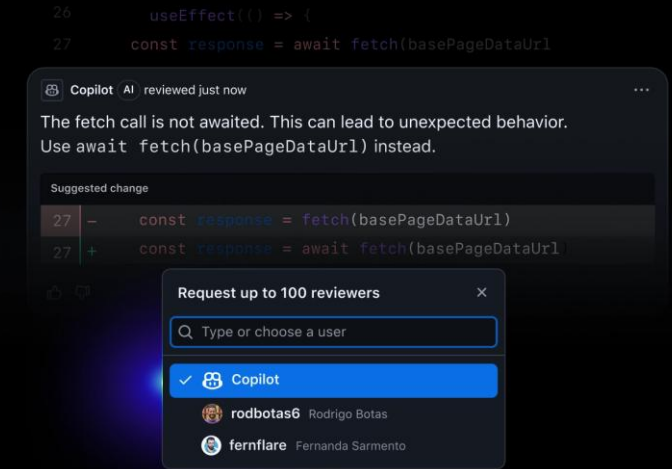

Coding Agent

Core capabilities

- Async autonomous development
- Runs via GitHub Actions compute
- Creates draft pull requests

Best for

- Well-defined features and bug fixes
- Issues assigned on GitHub
- Background tasks while you focus elsewhere

Code Review

Core capabilities

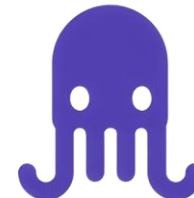

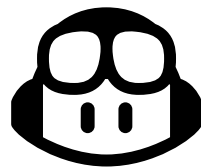

- Context-aware PR reviews
- Built-in security and quality guardrails in the IDE

Best for

- Offloading manual review and remediation tasks
- Catching risks early and scaling code standards

Agent HQ

Any agent, any way you work on GitHub

Public Preview

**No additional subscriptions required,
access is included with your Copilot Enterprise license**

📁 GitHub Copilot for Jira (Public Preview)

Activate Copilot coding agent directly from Jira. Less switching, more doing

<https://github.blog/changelog/2026-03-05-github-copilot-coding-agent-for-jira-is-now-in-public-preview>

The screenshot shows an Azure Boards interface for a user story titled "614 Create multi-select breed filter dropdown component". The story is assigned to Dan Hellem and is in the "Active" state. The description includes a narrative about a dog adopter and a list of acceptance criteria. The right sidebar shows planning details like story points (2) and risk, as well as classification (Business). A "Development" section lists a GitHub branch and a pull request. The "Discussion" tab is active, showing three comments from the "GitHub Copilot Coding Agent" that discuss the pull request and the agent's progress on the task.

State Active Area PetsWorkshop Updated by Dan Hellem: Wednesday

Reason Implementation started Iteration PetsWorkshop\Iteration 1 Details 3 0

Description

User Story: Create multi-select breed filter dropdown component

Narrative

As a potential dog adopter, I want to see and select from all available dog breeds in a dropdown interface so that I can begin narrowing down my search to specific breeds I'm interested in.

Acceptance Criteria

- Dropdown component displays all unique breeds from the database
- Users can select multiple breeds simultaneously
- Component shows visual indication of selected breeds (checkboxes or badges)
- Dropdown is searchable/filterable for quick breed lookup
- Breeds are displayed in alphabetical order
- Component handles loading state while fetching breeds

Discussion

 Copilot Coding agent

Copilot handles the entire pull request workflow, so you can ship faster

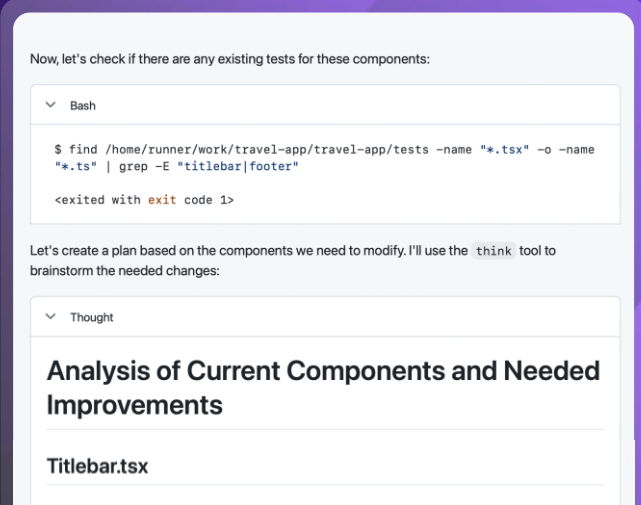

From working on existing PRs, to summarizing changes, to logically grouping changes, Copilot does the prep work so you can review & merge.

<https://docs.github.com/en/enterprise-cloud/latest/copilot/concepts/agents/coding-agent/about-coding-agent>

Customize GitHub Copilot

GitHub Copilot can be tailored to the way your team works, the tools you use, or the specifics of your project.

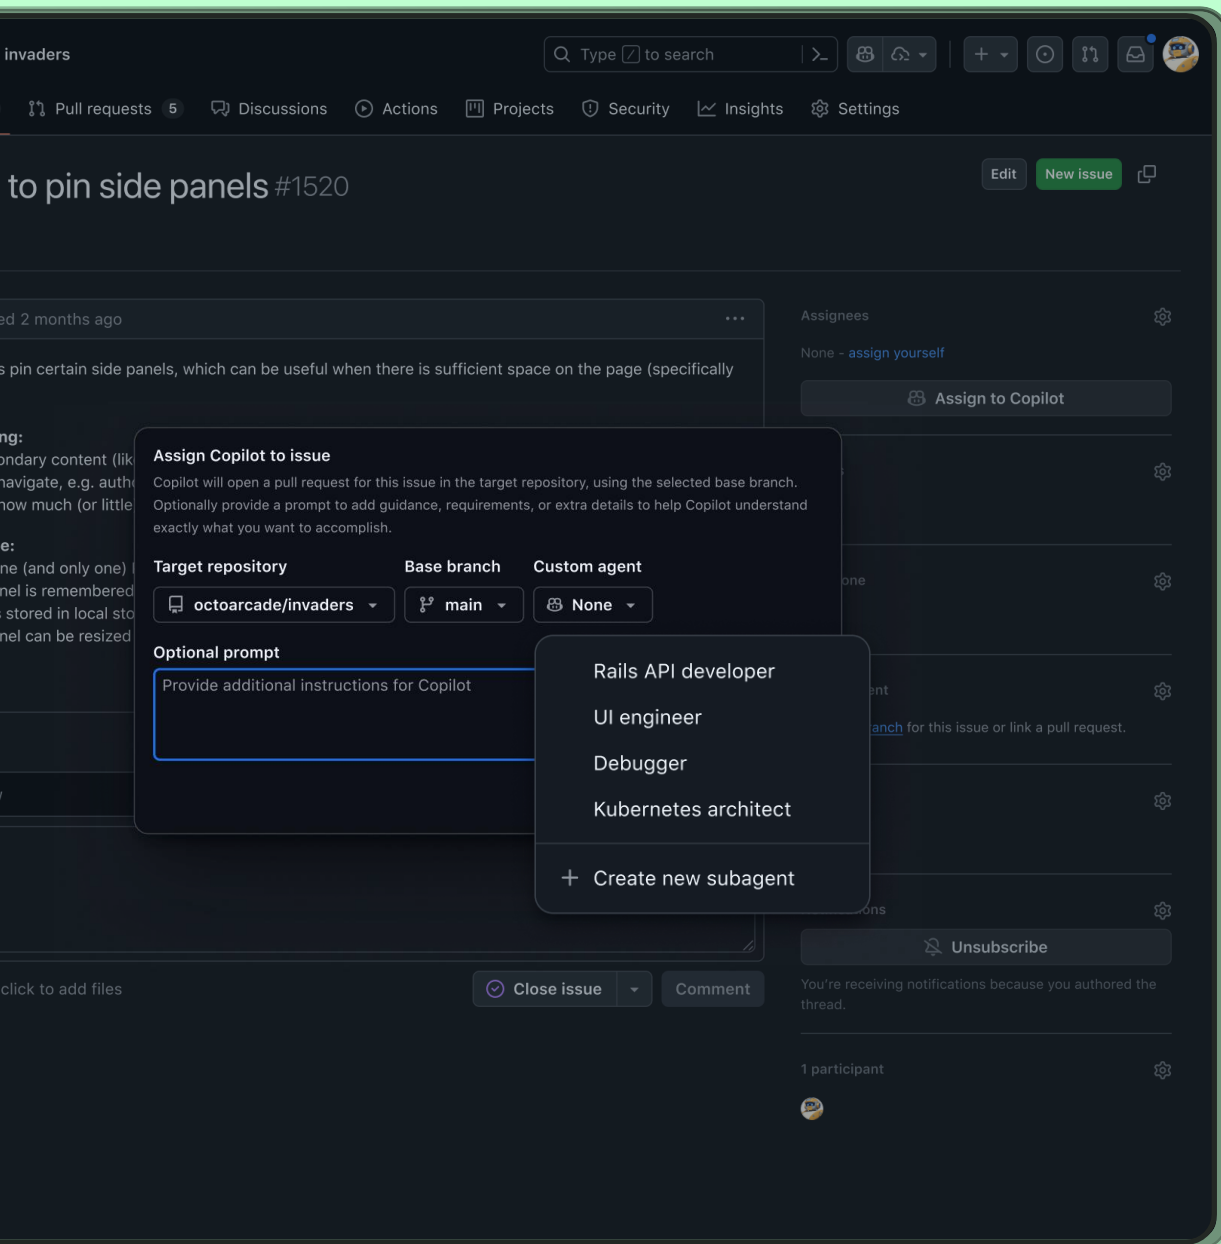

Copilot customization cheat sheet - This documentation explains how to deliberately shape GitHub Copilot's behavior so it consistently reflects your team's standards, workflows, and architectural expectations instead of relying on ad-hoc prompting. Understand which customization mechanism to use for governance, reuse, and scale—so AI assistance becomes predictable, auditable, and aligned with how your organization actually builds software. Knowing this lets you move from individual productivity gains to repeatable, organization-wide impact with Copilot.

Repository custom instructions - Specify repository-wide instructions and preferences tailored to the way your team works, the tools you use, or the specifics of your project. Refer to:

- Customization library - GitHub Docs - Discover a curated collection of customizations, including custom instructions and prompt files (VS Code only), to enhance your GitHub Copilot experience.
- <https://github.com/github/awesome-copilot>, an open source repository of community contributed custom agents, instructions, prompts and more.

Organization custom instructions - Organization owners can add instructions for GitHub Copilot Chat in order to tailor chat responses to the needs and preferences of your organization.

Personal custom instructions - Receive chat responses that are customized to your personal preferences, across your conversations on the GitHub website. For example, you can choose to always have Copilot Chat respond in a preferred language or with a particular style.

Custom agents

Reduce repetitive prompting by creating specialized agents to target recurring tasks

Equipped with tailored prompts, tool sets, and MCP server connections, you can implement features or fix bugs without needing to configure every time

Daily Repo Status Report

Create a daily status report for maintainers.

Include

- Recent repository activity (issues, PRs, discussions, releases, code changes)
- Progress tracking, goal reminders and highlights
- Project status and recommendations
- Actionable next steps for maintainers

Keep it concise and link to the relevant issues/PRs.

Daily Repo Report - February 9, 2026 #13697

github-actions[bot] · bot · announced in Daily News

github-actions[bot] · bot · yesterday

The gh-aw project is firing on all cylinders! 🚀 With significant commit activity, steady issue resolution, and fresh releases rolling out, the team is making excellent progress on improving code quality, debugging capabilities, and runtime tooling.

Key Highlights:

- 📦 2 new releases today: v0.41.1 and v0.41.0
- 📈 1,737 commits in the last 30 days from 16 contributors
- 🔄 100 issues closed with 190 new issues opened (net +90 issues)
- 📄 50 PRs merged from 93 opened PRs
- 🔍 5 code quality issues opened today focusing on refactoring opportunities

Recent Wins

Merged Pull Requests (Last 5):

Reduction on overall efforts for upgrading apps⁶

COBOL App Modernization Resources

- How GitHub Copilot and AI agents are saving legacy systems
 - Legacy COBOL systems aren't going away—but AI can make them manageable. Learn how Copilot and AI agents modernize critical infrastructure without costly rewrites.
- Modernizing Legacy: COBOL to Cloud with GitHub Copilot (YouTube)
 - Join Julia Kordick, Software Global Black Belt at Microsoft, as she demonstrates how AI-assisted tools like GitHub Copilot and autonomous agents are transforming large-scale COBOL modernization. Julia will showcase a live demo of migrating legacy COBOL, covering reverse engineering, automated documentation, test generation, and code transformation.
- **Legacy Modernization Agents to migrate COBOL to Java or C# developed with the Semantic Kernel Process Function** - <https://github.com/Azure-Samples/Legacy-Modernization-Agents>
 - This open source migration framework was developed to demonstrate AI Agents capabilities for converting legacy code like COBOL to Java or C# .NET. Each Agent has a persona that can be edited depending on the desired outcome. The migration is using Semantic Kernel Process Function where it does analysis of the COBOL code and its dependencies. This information is then used to convert to either Java Quarkus or C# .NET (user's choice).

GitHub Monthly Enterprise Roundup (MER)

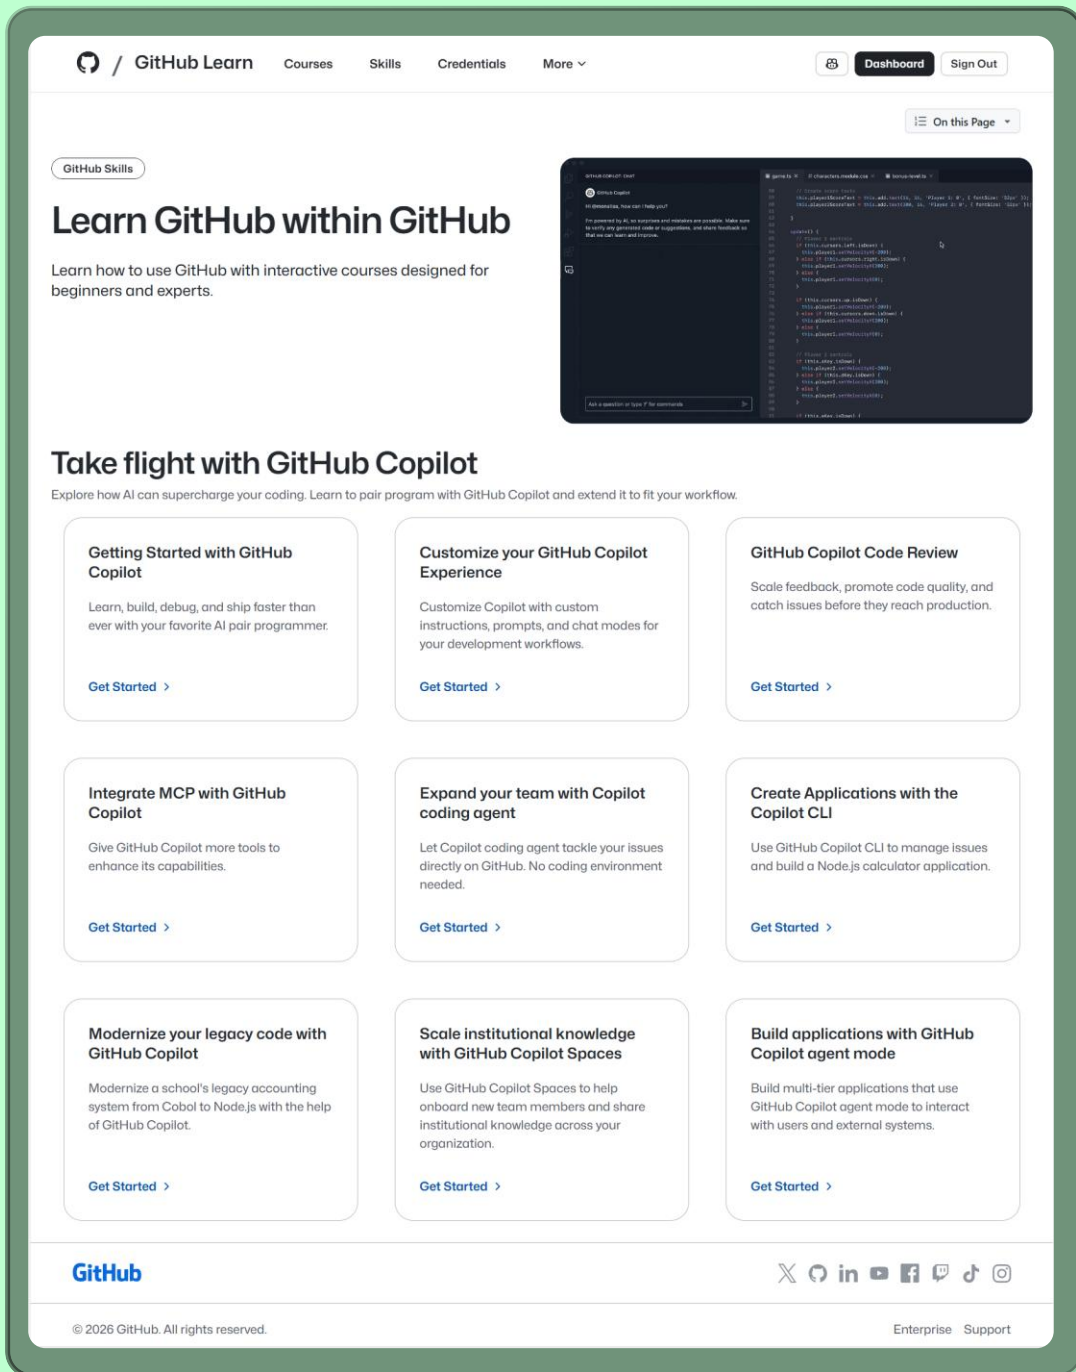

GitHub is shipping new features, product updates, and best practices faster than ever. To help you stay ahead, our Enterprise Advocacy team curates a monthly roundup — bringing you a concise, enterprise-focused summary of the most important updates you might have missed.

In these posts, you'll find a carefully selected list of key innovations, expert insights, and must-know resources—guided by feedback from GitHub's largest customers—to help your team innovate faster, boost productivity and enhance security.

Share with your teams and stakeholders so they can also get the most out of their GitHub experience.

Follow **GitHub Enterprise** on **LinkedIn** to be notified of each new post.

Training and onboarding developers on GitHub Copilot

Whitepaper

Developers use GitHub Copilot to write code, generate tests, fix bugs, create documentation, and much more.

To fully realize Copilot's potential, entire teams, not just individual developers, must adopt new skills. While Copilot may be a tool like any other, generative AI presents unique adoption challenges that require specific solutions.

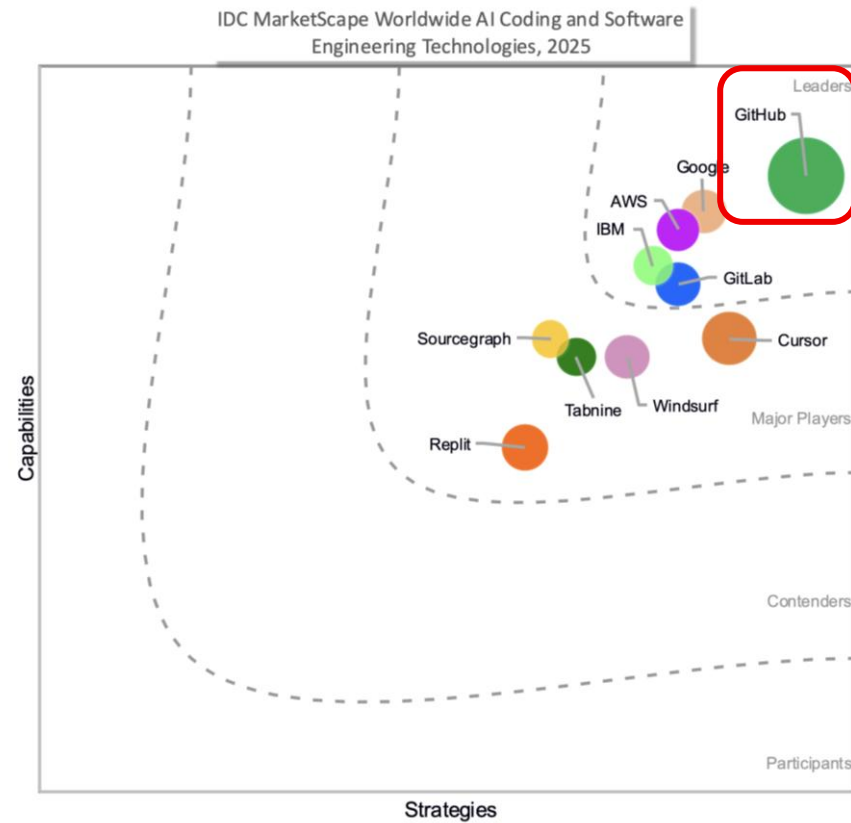

In this white paper, we'll cover:

- How Copilot differs from other products.
- The four key pillars for a successful rollout.
- Suggested approaches for helping developers adopt Copilot.
- A sample 90-day onboarding plan.
- Resources for training developers to use Copilot.

🔗 [Gartner Magic Quadrant for AI Code Assistants](#)

Source: IDC, 2025

🔗 [IDC MarketScape AI Coding and SWE Technologies](#)

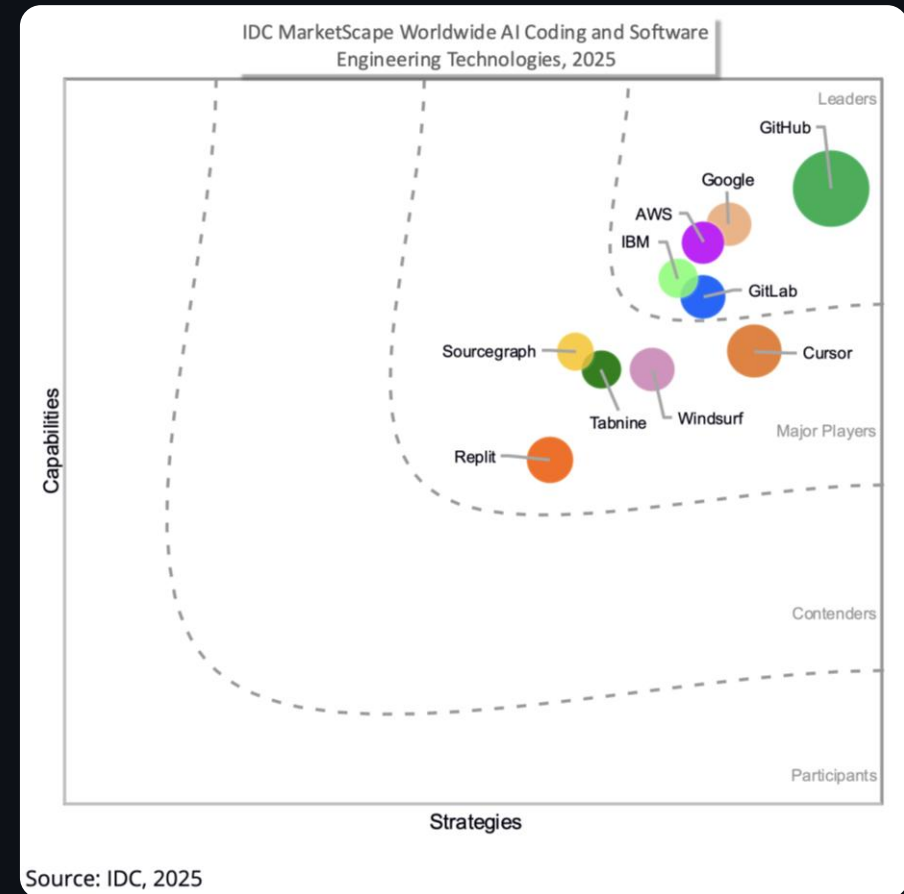

IDC MarketScape for AI Coding and Software Engineering Technologies 2025

GitHub recognized as a Leader by IDC MarketScape

The report noted, “GitHub Copilot is one of the most widely adopted AI-powered coding assistants in the world. Launched in 2021, Copilot has become a cornerstone of the modern developer's toolkit, integrating deeply with GitHub's ecosystem and a wide range of IDEs.”

We believe GitHub's differentiated value lies in its comprehensive, platform-driven approach to AI-powered development. As the IDC MarketScape notes, “The platform is designed to assist throughout the entire software development life cycle, from planning and code generation to testing, documentation, and code review, providing contextualized assistance at every stage. This comprehensive approach empowers organizations to streamline workflows, maintain code quality, and accelerate delivery across even the most complex, multiplatform projects.”
